

EXERCISE 1 INTRUCTION

Result:

1. Backend

- Don't change any code in backend
- Run: **npm run dev**

2. Frontend: **public** (*You will work only in public folder*)

- In **public** folder **index.html** and **main.js** request data from backend using **axios** and display in card like image above.
- When you click on **view** button it will display modal with details users information like: **name, email, university, city, country and social media.**
